Information about your

CT Enterography

What is CT Enterography?
CT Enterography is a test which uses a CT scanner to produce images of the small bowel as it is difficult to see the small bowel. The aim of the test is to drink enough liquid to fill the small bowel so we can see it better on the scan. Water doesn’t work very well, and so we use other liquids, usually a bowel preparation called Klean-Prep.

Where is the test done?
In the CT scanner in the x-ray or imaging department.

When can I discuss the test?
You can discuss this with your referring doctor or with the Radiologist or Radiographer before the procedure.

On the day before your test
Take a light diet only, do not eat fruit or vegetables. Please see the dietary instructions on pages 4 and 5 of this leaflet.

On the day of your test
If you have a morning appointment, do not eat food after midnight the night before. You may still drink water.

If you have an afternoon appointment, take an early light breakfast, and have nothing to eat after this. You may still drink water.

Diabetes
If you are diabetic please continue to take any medication as usual.

What happens during CT Enterography?
The radiographer or nurse will explain the test and answer any questions you have, and ask you to sit in the waiting area. Please let them know if you have had any problems with diabetes, asthma, kidney disease, high blood pressure, or any allergies, especially to X-Ray contrast (dye) injection.

We will give you Klean–Prep before your test (we call this bowel preparation). You will need to drink as much Klean-Prep as possible gradually over one hour, up to two litres (3-4 pints). This is about 500ml (one pint) every 15 minutes.

We will place a needle into a vein in your arm.

We will take you into the scan room and ask you to lie on the scanner table on your back. We will give you the injection of the contrast (dye) through the tube in your arm. This may cause a warm flushing feeling but this only lasts a few seconds. The radiographers will tell you when this is about to happen.

We will ask you to hold your breath for the scan which takes about 20 seconds.
What happens after the scan?
We will ask you to stay in the department for 15-20 minutes before going home. You may wish to use the toilet as the Klean-Prep can cause diarrhoea. You should also keep this in mind when making your way home.

How long will it take?
The procedure will usually take about 20 minutes. However, you can expect to be in the department for about 1-2 hours.

Are there any risks?
CT Enterography is regarded as a very safe test.

Very rarely, problems can occur, and if they do, they are similar to those which could happen with other methods of examining the bowel. These include the following; abdominal discomfort, faint-like reactions, reaction to the injected contrast, diarrhoea from the Klean-Prep.

Your doctor has asked for this test because they feel that the benefits are greater than the risk of not having the examination. Even so, we cannot guarantee that this test will detect all abnormalities in the bowel.

Precautions

- You should continue to take any medication as normal.
- If you are pregnant or have had difficulties in the past with Klean-Prep please call us for advice on the telephone number on your appointment letter.

Foods you can eat

- Tender lean meat, poultry, ham, liver, kidney, texturised vegetable protein
- Fruit flavoured or set yoghurt
- Peeled potatoes, boiled, mashed, roasted
- Carrots, turnips, swede, cauliflower (no stalks)
- Clear or strained soup
- Soft tinned fruit in juice (no pips)
- White bread, flour, rice or pasta
- Water biscuits, cream crackers, rich tea
- Plain scone (no fruit)
- Honey, syrup, ice cream
- Tea, coffee, sugar, sweeteners, but no milk
- Tomato juice, clear fruit juice, squash
- Water and fizzy drinks
Foods to avoid

- Tough meat, beefburgers, sausages
- Sausage rolls, pies, pasties, pastries
- Milk, butter, cheese, margarine, fats and oils
- Whole fruit or muesli yoghurts
- Jacket potatoes – must be peeled
- All other fruit, vegetables and salad
- Thick soup, Baked beans
- Wholemeal bread or flour, whole wheat pasta, brown rice
- High fibre crispbread, digestives, hobnobs
- Cakes with fruit, nuts, coconut
- Nuts and dried fruit
- Jam or marmalade with peel or pips
- High fibre cereals, porridge, muesli, bran

When will I know the result?

We will send your results to the hospital consultant or GP who asked us to do the test.

Please note: If you do not attend for the test we will tell your hospital consultant or GP and will remove you from the waiting list for this test.

You should tell the radiographer before your test if you have any concerns at all about the test.
