Board Infection Control Manager

**Responsible Director**
Board Medical Director
Communication

- The Infection Prevention and Control Nurses (IPCNs) will inform nursing staff when there is no longer a need for isolation/TBPs
- The nursing staff will inform the domestic staff that the isolation room requires a terminal clean
- The Infection Prevention and Control Nurses (IPCNs) will inform the domestic and nursing staff when a terminal clean is required for the ward and any affected surrounding areas.

Requirements

A terminal clean should only commence after the patient’s belongings and any other surplus equipment have either been discarded as clinical waste or been cleaned and removed from the area. A co-ordinated approach and agreed schedule needs to be in place between domestic staff and ward staff.

Equipment needed

- Disposable or launderable mop head and bucket – appropriate colour coded (yellow) for use in terminal cleaning
- Dust control mop (disposable cover)/ suction cleaner (HEPA filter)
- Small bucket or bowl
- Single-use cloths - colour coded as per terminal clean
- Single-use scourer
- Non-sterile single-use gloves
- Disposable single-use yellow apron
- Clinical waste bag (orange)
- Chlorine based detergent (1000ppm)
- Water soluble bags
- Secondary plastic bags

Where possible, individual cleaning equipment should be used per isolation room or cohort area.

All re-usable equipment must be cleaned with a chlorine based detergent after use including vacuum cleaners. (external only)
If multiple isolation rooms are being cleaned, the solution and mop head must be changed between rooms. Cloths used in sanitary areas must be discarded immediately after use and a fresh cloth must be used for the general area.

The patient should be moved to another bedspace/ room, if possible prior to terminal clean, however if this is not always possible due to bed issues or patients general condition, then nursing staff should also ensure that patients mattress/ frame is decontaminated and fresh bedding applied at the time of terminal clean.

The domestic staff will:

• Check area for any visible contamination with blood/body fluids. If present, inform staff who will decontaminate the area with 10,000ppm chlorine based product before cleaning commences.
The most up-to-date version of this SOP can be viewed at the following website:

Procedure (cont/ ...)

- Remove curtains, screens and shower curtain and bag as infected laundry, i.e. place into water soluble bag and then into a secondary plastic bag then into a laundry bag as per National Laundry Guidance
- Gather items of rubbish, including disposable curtains where present, and place in orange healthcare waste bag.
- Clinical waste bags should be sealed in accordance with the NHSGGC Waste Policy (orange).
- Clean all horizontal surfaces first with the solution chlorine based detergent (1000ppm). Cleaning should start at the top and finish on the lower surfaces.
- Curtain tracks should be damp dusted.
- Clean all furniture, fixtures and fittings with a solution of chlorine based detergent (1000ppm). Ensure that chlorine based detergent is rinsed off and furniture, fixtures and fittings dried
- Clean all wash hand basins, showers and toilets using chlorine based detergent (1000ppm) then dry using disposable colour coded cloth/ paper. Discard into orange bag after use. Dry mop/ suction clean the floors (hepafilter) working from furthest point towards the door. The floor should then be damp mopped using dedicated equipment and a chlorine based detergent (1000ppm). Mop heads used must be discarded as clinical waste or placed in a bag and sent for laundering.

All re-usable equipment must be cleaned with a chlorine based detergent after use, including suction cleaners (external only).

The mop heads and cleaning solution must be changed between rooms. Cloths used in sanitary areas must be discarded immediately after use and a fresh cloth must be used for the general area.

- Clean and remove all cleaning equipment, materials and rubbish from room/area.
- Check all cleaning procedures are complete.
- Once clean is complete, the mop head should be bagged for laundering.

The most up-to-date version of this policy can be viewed at the following website:
### Procedure (cont/ ...)

- If there is waste water from a mop bucket, this should be flushed carefully down the WC in the ensuite avoiding splashing which will contaminate the environment, and the mop handle and bucket cleaned. Waste water can be taken to the DSR and the mop handle and bucket cleaned in the DSR where appropriate, while wearing appropriate PPE.
- Dispose of PPE, seal waste bag and **WASH HANDS using liquid soap and water**.
- Replenish supplies (e.g. paper towels, soap) within the room.
- Storage of equipment should be in accordance with local infection control advice.
- Replace curtains/blinds.
- Replace waste bags.
- Replace screens, shower curtains and window curtains (if appropriate).
- After a terminal/deep clean the ward/ Isolation room can be opened/ used immediately once all the surfaces are clean and dry.
- It should be noted that a terminal clean of a ward includes not only the patient rooms but all rooms (sluice/ treatment area/ corridor areas etc) also and only when cleaning of all areas within the ward is completed is the area ready for reopening.
- **DO NOT ADMIT PATIENTS TO A CLOSED WARD OR AN ISOLATION ROOM UNTIL THE TERMINAL CLEAN IS COMPLETE.**

### Healthcare staff will clean/ Check:

- All patient related equipment
- All computing equipment
- All commodes
- Every bed and mattress, the part of the bed on which the mattress lies and the bed rails
- Lockers and bed tables at all bed spaces
- Patient call buzzers
- Make up all beds with clean linen, and complete bed space checklist (including mattress check).
