

## NEW CHILDREN'S HOSPITAL PROJECT

### OUT-PATIENT SUB-GROUP

#### Key Tasks

- To identify the need of individual specialties/services in respect of outpatient activity including any specialty-specific requirements that impact on accommodation or configuration.
- Based on individual specialty needs to determine the overall accommodation and facilities requirement for the effective delivery of outpatient care.
- To identify key interactions and synergies between clinical services that should be reflected in the configuration of accommodation/facilities.
- To ensure that recommendations regarding outpatient facilities support best practice models of care eg one stop clinics.
- To identify and make recommendations regarding the physical and functional relationships between outpatient areas and other hospital facilities.
- To identify key principles that should inform outpatient accommodation planning including:
  - provision of support services/facilities eg pharmacy, play facilities, “sibling” facilities etc
  - relationship of accommodation configuration to effective staffing models
  - patterns of utilisation including eg evening clinics/weekend use
  - issues that directly impact on the size and configuration of examination rooms/waiting areas etc eg the needs of families, teaching provision etc
- To identify the future patterns of service provision for the hospital-based therapy services and make recommendations as to how these need to be addressed in the planning process in terms of accommodation/facilities and location.
